

4. Decorating

When you decorate your tree, use lights that don't get hot, called LED lights. Don't spray anything on the tree, and don't use any chemicals. Have a super fun time decorating your tree!

1. Climatize

Before the tree comes inside, it needs to nap in the garage for two days to get used to our home's temperature. Make sure it has water and stays in a cool place, then it's ready for holiday fun!

2. Choose a location

Find a good spot for your tree away from heaters and fireplaces. Those can make the tree's tips brown and crispy. Clear that space so the tree can be happy there!

3. Ice/Water your tree

Give your tree water with ice! Every two days, put 1 or 2 ice trays on the soil around the tree. The ice melts slowly, making the tree happy and healthy for Christmas!
